

Why our Competitors are seeing RED!

Thermal image of a conventionally built home showing heat loss across the entire wall.

Thermal image of a SIPs home showing minimal heat loss, resulting in lower energy bills.

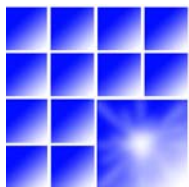

Unlike traditional exterior walls and roofs,
the *Cornerstone Building System* SIPs
walls and roofs will prevent costly heat loss and will
significantly lower your energy bills.

The Cornerstone Building System SIPs panels save a minimum of 50%, and up to 75% of your energy consumption – resulting in much lower monthly energy bills. The superior thermal performance of the CBS SIPs significantly limits air filtration, and strikingly reduces heating and cooling costs while noticeably increasing living comfort. The outstanding thermal capabilities of the CBS SIPs greatly lower HVAC system requirements, which results in substantial initial building cost savings.

CBS has teamed with EnergyWise to guarantee your energy savings. Call us to find out how.

Don't settle for less.
